

# TAZ Security Care – Advanced Compliance

*The most comprehensive solution to help SMBs meet critical compliance requirements.*

TAZ Security Care Advanced Compliance is the most comprehensive solution for businesses that need to meet critical compliance requirements.

Industry-leading security information and event management (SIEM) technology collects, analyzes and correlates information from network devices, endpoint logs and threat intelligence feeds. Our alerts are designed to meet the continuous log monitoring requirement specified by PCI, HIPAA and NIST-800 compliance regimes.

Regulation is a standardized rule by governing bodies to ensure organizations and proprietary information are secure. Here are two ways you can meet security compliance:

**Log Retention.** Most compliance regulations demand some level of log data retention. Security best practices also dictate retaining logs to assist in incident response. TAZ Security Care Advanced Compliance retains 90 days of logs available for quick download and the ability to retrieve logs as old as 400 days upon request.

**Compliance Reporting.** TAZ Security Care Advanced Compliance generates daily compliance reports based on your compliance needs, which can be downloaded and saved as required.

## **Cybersecurity Is Not a DIY Project**

The need for skilled cybersecurity professionals will only continue to grow. With TAZ Security Care, you can rest assured knowing that your network is as secure and protected as it possibly could be.

*TAZ Security Care Advanced Compliance provides the monitoring, analysis, and reporting your business needs to meet PCI, HIPAA and NIST-800 compliance requirements.*

## **Key Tools Your Business Needs to Meet Security Compliance**

### **Threat Intelligence Support**

Identify threats on servers and firewalls

Support compliance response guidelines

Keep networks and data safe and available 24x7

### **Ultimate SIEM Technology**

Combines a powerful SIEM platform with an experienced Security Operations Center running concurrently in the background

### **Monitoring and Analysis**

Monitor key log files

Identify and correlate suspected malicious events

### **Compliance Reporting**

Daily reports and threat analysis outlines

Demonstrate PCI, HIPAA, and NIST-800 compliance
